

News Release

Cumberland, RI – 11/15/2006

Spokespeople from MRL Hydraulics LLC and Aqualics LLC announced today a merger between the two organizations to be finalized by February of 2007. MRL, founded earlier this year, is a niche oriented marketing company for fluid power lubricants used in all types of industrial applications. Aqualics, a marketing and final blender of water based hydraulic fluids is primarily known in the carwash industry. Aqualics LLC was founded late in 1999 and grew out of the experience of Pinnacle Solutions. The founder of Aqualics LLC was one of the original founders of Pinnacle Solutions and was the one who originally introduced water based hydraulics to the carwash industry in the middle 1990's under the trade name Aquablue.

The merger creates a new company that can serve a wider variety of markets with a focus on new fluid power applications. Not only will the markets be expanded but MRL will be able to blend a variety of products to meet the expected growing demand. All products that will be offered will be eco-friendly and fire resistant.

MRL has already reached agreements with chemical suppliers to research and test new families of fluids to focus on niche markets currently not served by synthetic lubricants.

The entire focus of MRL will be to blend and market lubrication products that are environmentally safe, process safe, and people safe. Coupled with state of the art lubricants; MRL's unique fluid power knowledge and experience is expected to add a new dimension to the supply of hydraulic fluids. MRL takes the position of carefully matching the application with right fluid. Current synthetic hydraulic lubricants are not right for every application and MRL will not supply fluid to "bad fit" applications.

MRL Hydraulics LLC's goal is to set a new level of performance and standards for the hydraulic lubricant supply industry.
